

National Weather Service Tallahassee, Florida

In this update:

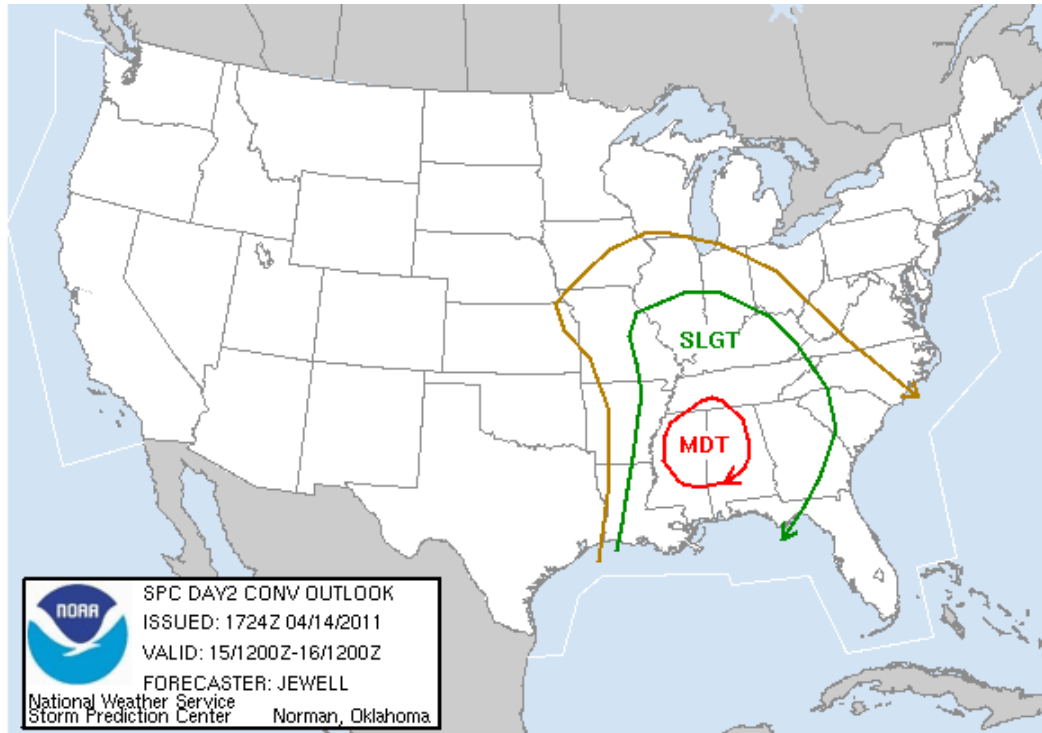

- Severe Thunderstorms Possible Friday Evening into Saturday morning

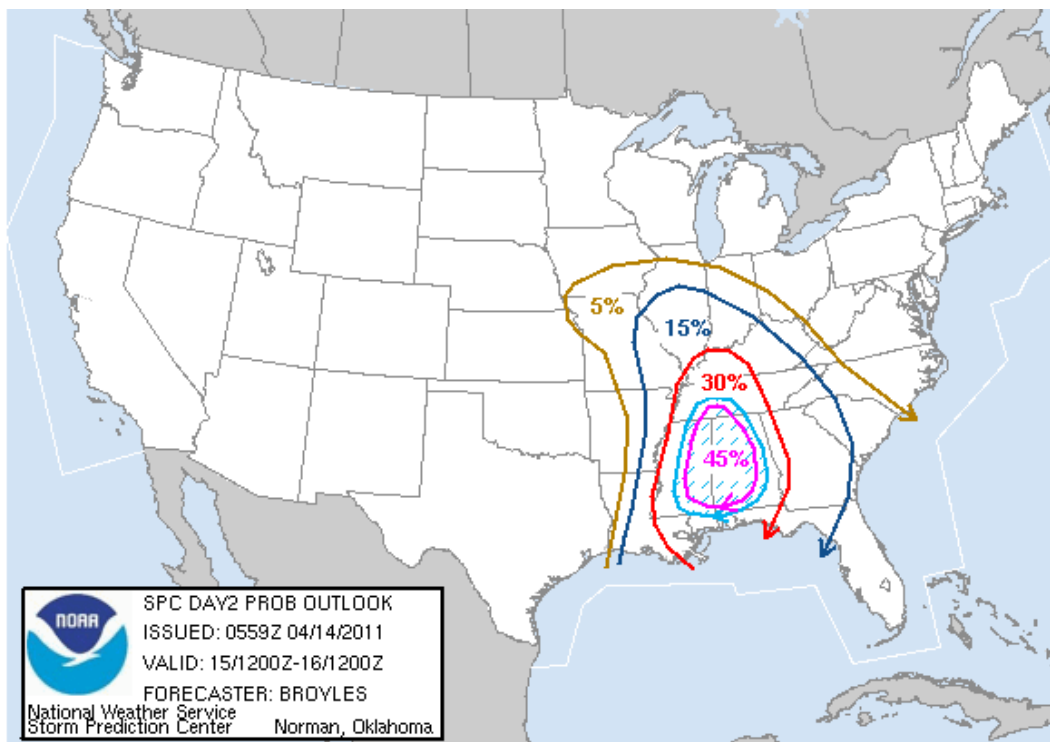

The current weather picture and event summary:

A storm system will begin gaining strength this afternoon across the Central Plains and move eastward toward the Mississippi River tonight. As this system moves eastward, a warm and moist airmass will lift northward across the Central Gulf Coast states. As this system combines with a potent upper level system, wind shear will increase across the Southern United States and create an environment favorable for the rapid development of strong to

severe thunderstorms across the Mid South and Southeast on Friday afternoon and evening.

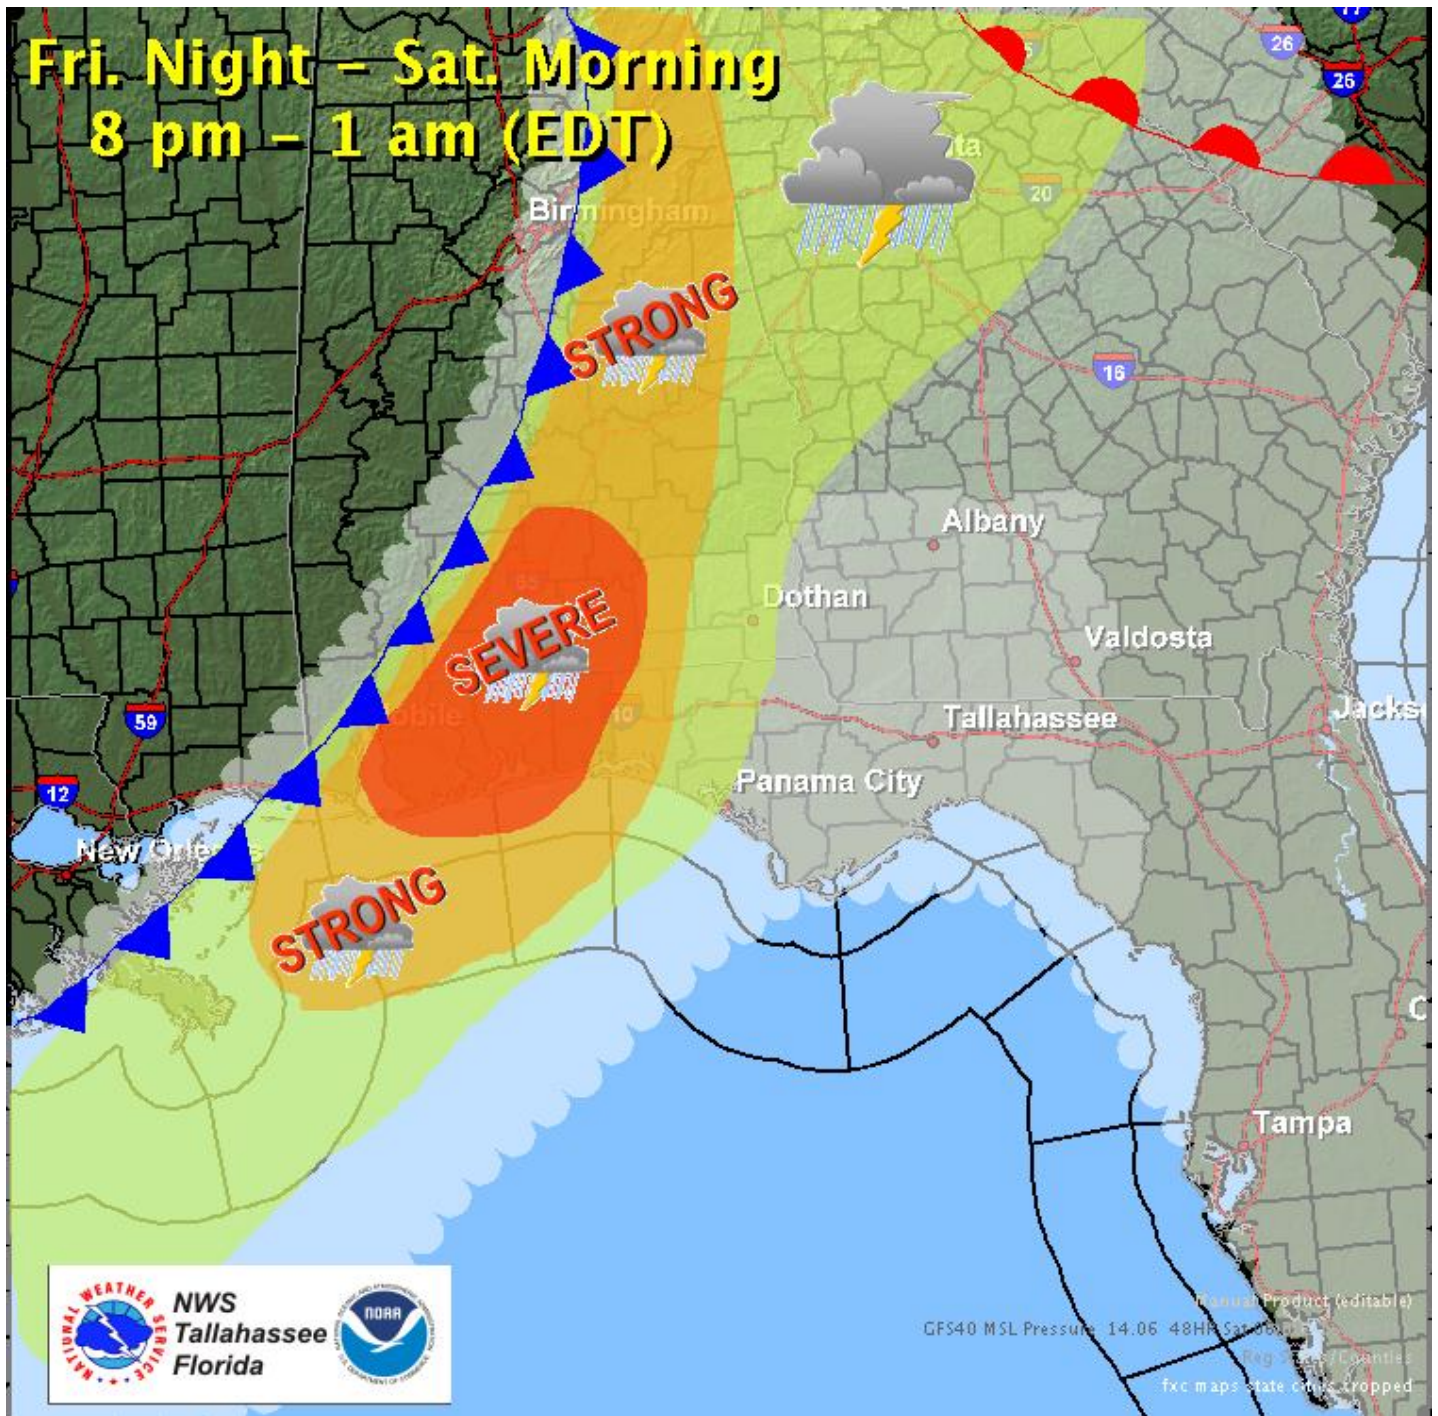

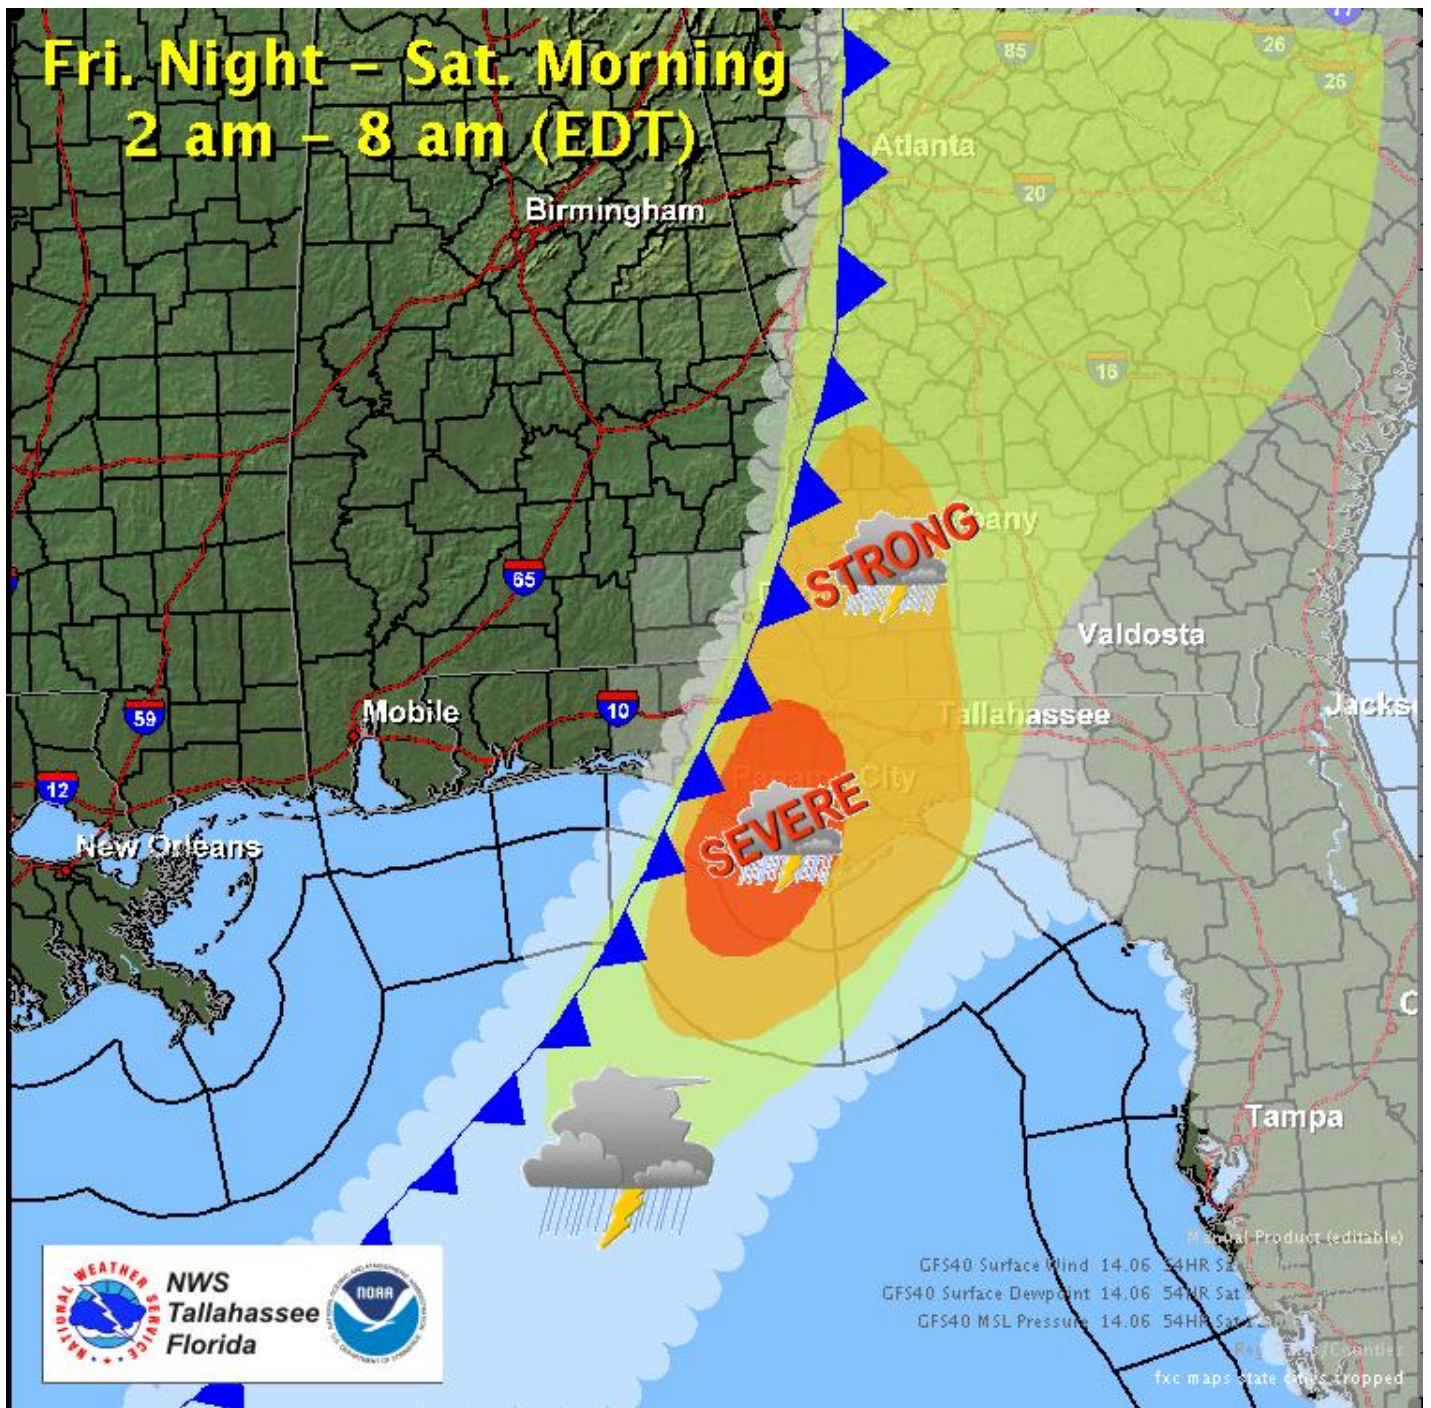

Due to the combination of strong wind shear and increasing instability, the severe potential for Friday night into Saturday is elevated. Most of our region is included in a slight risk for severe weather, with the greatest potential for severe weather located across our western areas, primarily west of a line from Albany to Tallahassee.

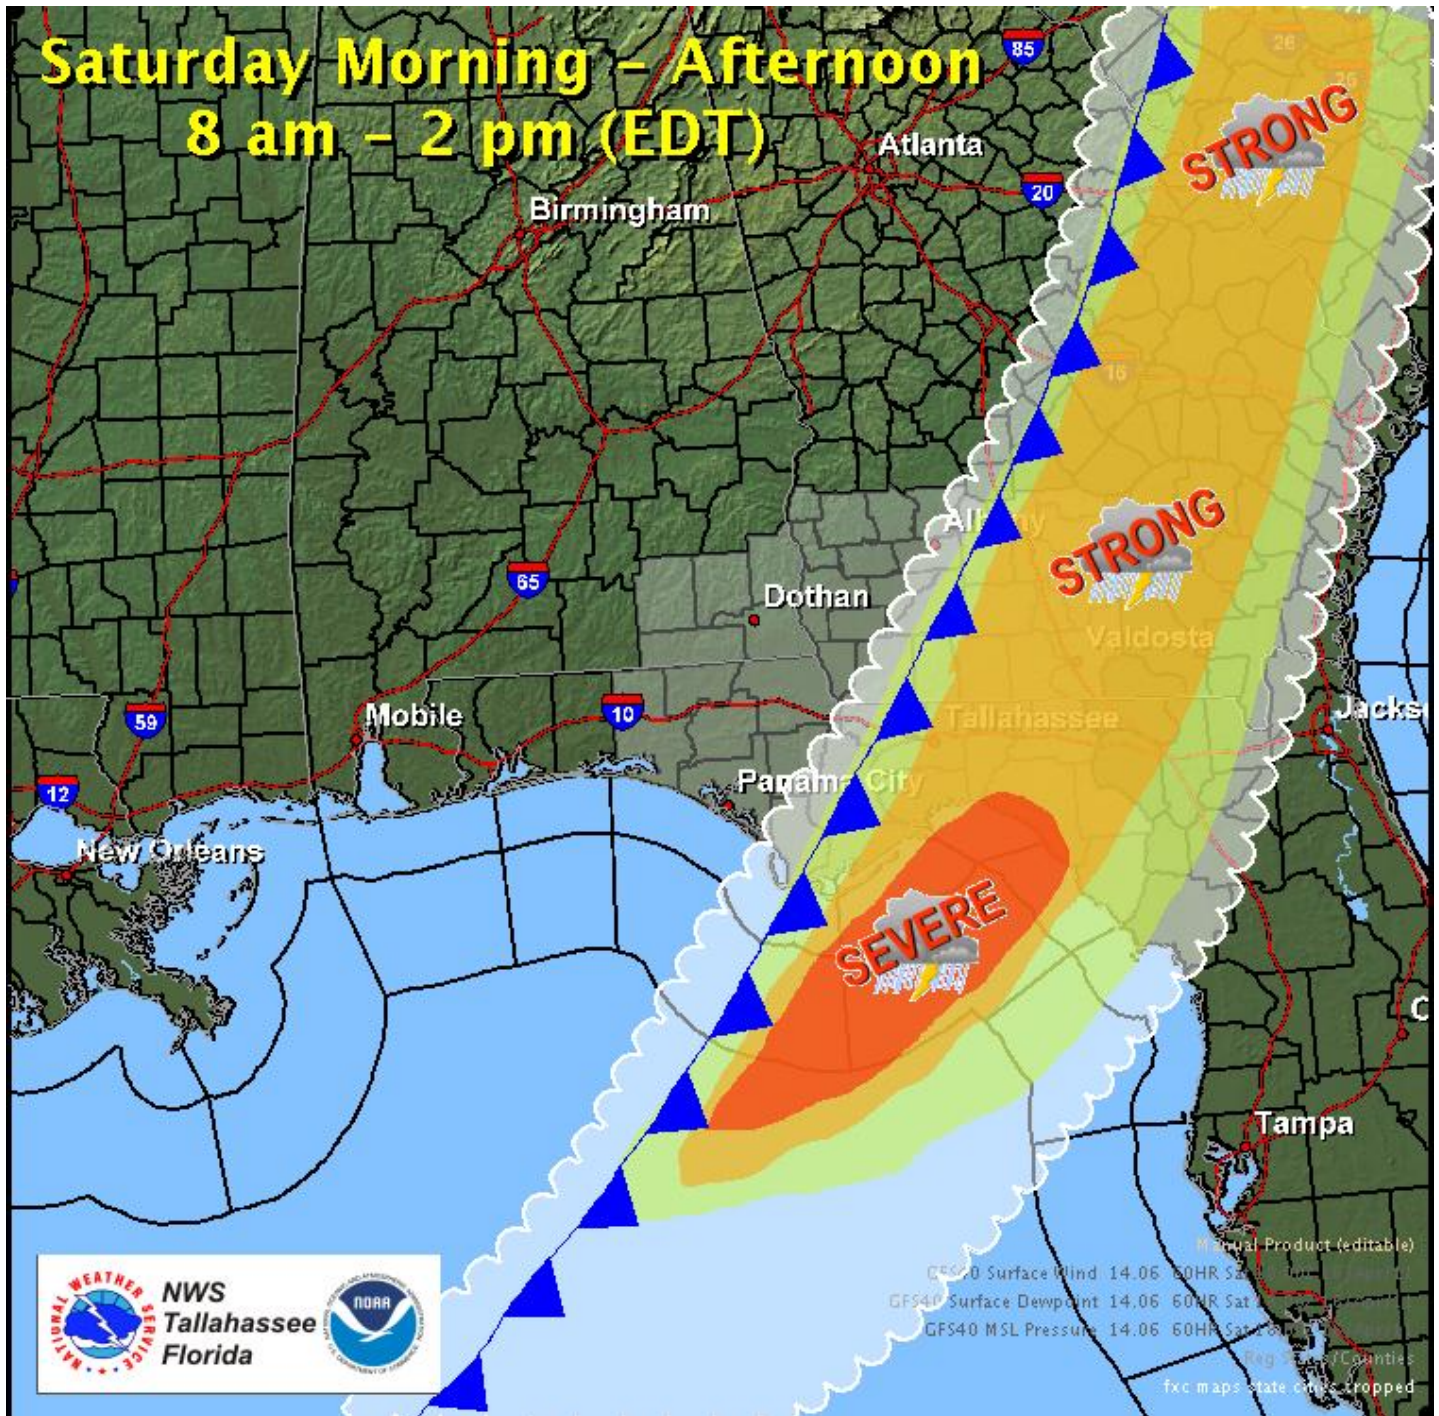

Timing:

The following images are based on the latest forecast models on this system. As a result, minor deviations to the timing are possible and these predictions will be further refined by midday on Friday.

Summary:

- Severe weather is possible Friday night continuing into Saturday morning across the region.
- Isolated tornadoes and damaging winds will be the primary threats with this system.
- The greatest severe potential is along and west of a line from Albany to Tallahassee.
- The severe weather probabilities are similar in magnitude to the recent April 5th severe weather event.

The National Weather Service in Tallahassee will continue to monitor this system closely today. If you have any questions, please give our office a call at 850-942-8833 or on our toll free line at 800-598-4562 and ask to speak to a meteorologist. We are available 24 hours a day, 7 days a week. You can also reach us on our Southern Linc phone at 1*77*184.
